**Subject: ACN# 05A-13 Advanced Change Notification of Intent to Transfer
Lattice MachXO Product Families**

Dear Lattice Customers,

Lattice is providing this Advanced Change Notification (ACN) of our intent to transfer Lattice MachXO™ and LA-MachXO 130nm product families from Fujitsu Electronics' 200mm fab in Mie Japan to their 300mm adjacent fab. Lattice is taking advantage of a fabrication line consolidation effort within Fujitsu Microelectronics to make this move to a newer, more-advanced line. Transfer to this newer line will help ensure longevity for this successful programmable logic device (PLD).

Lattice will have sufficient inventory and capacity to support a smooth transition for the LCMXO/LAMXO families to the 300-mm line. Product from this newer line will be form, fit and function compatible with the current 200-mm line product.

A formal Product Change Notification (PCN) will be forthcoming in the second half of 2014 with samples available at that time.

Please contact your local sales representative with any questions regarding this planned change.

Sincerely,

Lattice Semiconductor PCN Administration
