# 1. General Description

The SiI9437/SiI9438 ARC/Enhanced ARC receiver/transmitter from Lattice Semiconductor adds higher bandwidth Enhanced Audio Return Channel (eARC) capability to HDMI®-based designs.

The SiI9437/SiI9438 ARC/Enhanced ARC receiver/transmitter support audio bit rates up to 98 Mb/s (36.8 Mb/s payload). Manufacturers of televisions, audio/video receivers, and sound bars can use these devices to implement eARC with up to 8-channels of 24-bit, 192 kHz audio.

This new high bit rate, low jitter audio interface transmits over standard HDMI with Ethernet cable using the available differential twisted pair of pins 14 and 19. The devices are backward-compatible with HDMI 1.4 Audio Return Channel, for connectivity with legacy ARC devices.

Implementing eARC into consumer electronics products helps to ensure greater interoperability and forward-compatibility without compromise. This is especially important as new devices with Dynamic HDR, Variable Refresh, and other HDMI 2.1 features come to market.

The SiI9437/SiI9438 include support for the eARC Common Mode Data Channel, used for Discovery, Capability Detection, Heartbeat, and Lipsync features of eARC.

The SiI9437/SiI9438 design enables integration in conjunction with existing HDMI transmitters and receivers, and operates independently of the HDMI frequency, mode, and encoding format. No HDMI 2.1 or HDMI 2.0 dependency exists; the devices can be integrated with HDMI transmitter/receivers using any version of HDMI.

Figure 1.1 on the next page shows a typical systems diagram of SiI9437/SiI9438 ARC/Enhanced ARC receiver/transmitter

## 2. Pin Diagram

Figure 2.1 shows the pin assignments of the SiI9437/SiI9438 device. The package is a 4 mm × 4 mm 32-pin QFN with an ePad. For best performance, the ePad **should** be soldered to a pad on the PC board that is electrically connected to ground, but it is not required to make an electrical ground connection since the package also has GND pins.

Pin names are generalized by type for this document. The list below the diagram describes the purpose of each type.

## 3. Package Information

### 3.1. ePad Requirements

The SiI9437/SiI9438 receiver/transmitter is packaged in a 32-pin, 4 mm × 4 mm QFN package with an exposed pad (ePad) that is 2.7 mm × 2.7 mm ( $\pm 0.1$  mm). Soldering the ePad to the ground plane of the PCB is recommended for improved grounding and thermal transfer but is not required for typical applications.

[Figure 3.1](#) on the next page shows the package dimensions of the SiI9437/SiI9438 receiver/transmitter.
