

PCN# 02B-12, issued on February 6, 2012 will supersede PCN# 02A-12, issued on January 30, 2012.

February 6, 2012

PCN#	Issue Date	Description
02A-12	January 30, 2012	Initial release.
02B-12	February 6, 2012	Software version affected by this PCN is corrected as Lattice Diamond 1.4.2

Subject: PCN# 02B-12 Notification of a Revision to the LatticeXP2, LA-LatticeXP2 and LatticeECP2/M Data Sheets

Dear Lattice Customer,

Lattice is providing this notification of our intent to revise the LatticeXP2™, LA-LatticeXP2 and Lattice ECP2™/M Data Sheets. The revision pertains to the removal of Soft Error Detect (SED) capability during normal active operation for all LatticeXP2, LA-LatticeXP2, and LatticeECP2/M devices. SED will continue to be available on devices when user logic is inactive.

See Exhibit "A" for a summary of changes to the data sheets listed below:

- LatticeECP2/M Family Data Sheet DS1006 Version 03.9, released in January 2012
- LatticeXP2 Family Data Sheet DS1009 Version 01.8, released in January 2012
- LA-LatticeXP2 Automotive Family Data Sheet DS1024 Version 01.3, released in January 2012

The SED logic that comes with LatticeXP2, LA-LatticeXP2 and LatticeECP2/M devices is a supplemental function that is not active without explicit selection by the designer. Designs that do not use this functionality are not affected by this PCN. Lattice's analysis of customer cases shows that less than 1% of the active customer base utilize this feature.

AFFECTED DEVICES

This PCN affects all devices listed in Exhibit "B" (also available in an Excel spreadsheet [here](#)). This PCN also affects any custom devices (i.e. factory programmed, special test, etc.) which are derived from any of the devices listed. All shipments of the indicated devices prior to this PCN are also affected. The OPNs remain unchanged for all affected devices.

DATA SHEET SPECIFICATIONS

The revised LatticeECP2/M data sheet ([DS1006](#) version 03.9 released in January 2012) reflects these changes.

The revised LatticeXP2 data sheet ([DS1009](#) Version 01.8 released in January 2012) reflects these changes.

The revised LA-LatticeXP2 data sheet ([DS1024](#) Version 01.3 released in January 2012) reflects these changes.

SOFTWARE SUPPORT

Lattice Diamond® 1.4.2 (due to be released in April 2012) has been modified to provide a warning to those designers that utilize the SEDA, SEDB or SEDAA library elements.

The warning reads as follows:

"Warning - The Soft Error Detect (SED) during normal active operation has been removed from this product (please refer to PCN#02B-12). The SED function can still run on a programmed device when the user logic is inactive. For additional questions, please contact Lattice Tech Support."

TIMING

These data sheet changes are effective immediately.

RESPONSE

Those customers using SED on their LatticeXP2, LA-LatticeXP2, or LatticeECP2/M devices should contact local field support immediately for instructions on next steps.

Lattice PCNs are available on the [Lattice website](#). Please sign up to receive e-mail PCN alerts by registering [here](#). If you already have a Lattice web account and wish to receive PCN alerts, you can do so by logging into your account and making edits to your subscription options.

CONTACT

If you have any questions or require additional information, please contact pcn@latticesemi.com.

Sincerely,

Lattice Semiconductor PCN Administration

EXHIBIT “A” – SUMMARY OF DATA SHEET CHANGES

LatticeXP2 Data Sheet Changes (Highlighted below)

1) Architecture Overview (page 2-1)

This family also provides an on-chip oscillator **and Soft Error Detect (SED) capability**. LatticeXP2 devices use 1.2V as their core voltage.

2) Soft Error Detect Support (page 2-40)

LatticeXP2 devices have dedicated logic to perform Cyclic Redundancy Code (CRC) checks. During configuration, the configuration data bitstream can be checked with the CRC logic block. In addition, LatticeXP2 devices can be programmed for checking soft errors in SRAM. **SED can be run on a programmed part when the user logic is not active. The SED operation can run in the background during user mode (normal operation).** In the event a soft error occurs, the device can be programmed to either reload from a known good boot image (from internal Flash or external SPI memory) or generate an error signal.

LA-LatticeXP2 Data Sheet Changes (Highlighted below)

1) Architecture Overview (page 2-1)

This family also provides an on-chip oscillator **and Soft Error Detect (SED) capability**. LA-LatticeXP2 devices use 1.2V as their core voltage.

2) Soft Error Detect Support (page 2-40)

LA-LatticeXP2 devices have dedicated logic to perform Cyclic Redundancy Code (CRC) checks. During configuration, the configuration data bitstream can be checked with the CRC logic block. In addition, LA-LatticeXP2 devices can be programmed for checking soft errors in SRAM. **SED can be run on a programmed part when the user logic is not active. The SED operation can run in the background during user mode (normal operation).** In the event a soft error occurs, the device can be programmed to either reload from a known good boot image (from internal Flash or external SPI memory) or generate an error signal.

LatticeECP2/M Data Sheet Changes (Highlighted below)

1) Soft Error Detect (SED) Support (page 2-48 to 2-49)

LatticeECP2/M devices have dedicated logic to perform CRC checks. During configuration, the configuration data bitstream can be checked with the CRC logic block. In addition, the LatticeECP2 device can also be programmed for checking soft errors (SED) in SRAM. **SED can be run on a programmed part when the user logic is not active. This SED operation can be run in the background during user mode.** If a soft error occurs, during user mode (normal operation) the device can be programmed to either reload from a known good boot image or generate an error signal.
