1.7.3 Unbiased HAST Data: uHAST

Unbiased Highly Accelerated Stress Test (uHAST) testing uses both pressure and temperature to accelerate penetration of moisture into the package and to the die surface. The Unbiased HAST test is designed to detect ionic contaminants present within the package or on the die surface, which can cause chemical corrosion. This stress is consistent with JESD22-A118, “Accelerated Moisture Resistance - Unbiased HAST”. The Unbiased HAST condition is 96 hours exposure at 130°C and 85% or 110°C and 85% relative humidity.
