

LatticeMico System Software Release Notes for Lattice Diamond 3.7

The LatticeMico System Software includes changes to the Lattice Mico System Builder (MSB) and Software Project Environment (C/C++ SPE) for Lattice Diamond® version 3.7.

What's New in LatticeMico System

The following component has been updated:

- ▶ Fault Logger (1.2) has the following fixes:
 - ▶ Added `usp_memerr_o` output for all Fault Logger SPI mode platforms.
 - ▶ Removed Unprotect command for fault logging.
 - ▶ Added Write-in-Progress check after fault logging in Fault Logger SPI mode.

Refer to the component datasheet for more information.

Release Compatibility

LatticeMico System Builder platforms developed prior to the release of Lattice Diamond 1.1 (or ispLEVER 8.1 SP1) may need to be analyzed and subsequently updated. Users who open a platform containing one of the

components listed below, at the version shown or older, will be given the option to update the platform:

SPI Flash v3.5	SDRAM controller v3.8
DMA v3.1	GPIO v3.4
UART v3.4	Fault Logger v1.0
GPIO v3.1	EFB v1.4

Users who choose to update a platform with a newer version of these components may need to make modifications to their C/C++ source code. It may also be necessary to update any RTL source code instantiating the LatticeMico System Software generated platform.

To get an understanding of how the newer version of these components affects the C/C++ and RTL code please read LatticeMico32 Technical Note [TN1221 - LatticeMico32 Migration Concerns Post ispLEVER 8.1 and Diamond 1.0](#). It has a complete description of the changes made, the situations where there will be an impact your existing design, and instructions on how to update your design if it is required.

Trademarks

All Lattice trademarks are as listed at www.latticesemi.com/legal. Synopsys and Synplify Pro are trademarks of Synopsys, Inc. Aldec and Active-HDL are trademarks of Aldec, Inc. All other trademarks are the property of their respective owners.
