1. Introduction

This document provides technical information and instructions on setting up and running the EVDK Based Human Counting Demo.

Refer to the following documents for detailed information on Lattice development boards and kit:
- Lattice Embedded Vision Development Kit User Guide (FPGA-UG-02015)
- CrossLink VIP Input Bridge Board Evaluation Board User Guide (FPGA-EB-02002)
- ECP5 VIP Processor Board Evaluation Board User Guide (FPGA-EB-02001)
- HDMI VIP Output Bridge Board Evaluation Board User Guide (FPGA-EB-02003)

2. Functional Description

The EVDK Based Human Counting Demo is designed to utilize the Lattice Embedded Vision Development Kit with MicroSD Card Adapter Board, as shown in Figure 2.1.

![Figure 2.1. Lattice EVDK with MicroSD Card Adapter](image)

The Lattice Embedded Vision Development Kit features a stackable modular architecture consisting of three boards:
- CrossLink™ Video Interface Platform (VIP) Input Bridge Board
- ECP5™ VIP Processor Board
- HDMI VIP Output Bridge Board
3. Demo Setup
This section describes the demo setup.

3.1. Hardware requirements
- Lattice Embedded Vision Development Kit
  - Mini-USB Cable
  - 12 V Power Supply
- HDMI Cable
- HDMI Monitor (1080p30)
- Machine Learning Adapter Card (ML-EVN-ADP)
  - The MicroSD Card Adapter (MICROSD-ADP-EVN) has been replaced by the Machine Learning Adapter Card (ML-EVN-ADP). The Machine Learning Adapter card includes an optional microphone input, but is otherwise a 100% functional replacement for the MicroSD Card Adapter.
- MicroSD Card

3.2. Software Requirements
- Lattice Diamond® Programmer (refer to http://www.latticesemi.com/programmer)
- Win32 MicroSD Disk Imager (refer to https://sourceforge.net/projects/win32diskimager/)
4. Programming the Demo

Both the CrossLink VIP Input Bridge Board and the ECP5 VIP Processor Board must be configured and programmed. Also, the demo design firmware must be programmed onto the MicroSD Card which is plugged into the MicroSD Card Adaptor Board.

4.1. Programming the CrossLink SPI Flash

4.1.1. Erasing the CrossLink SRAM Prior to Reprogramming

If the CrossLink device is already programmed (either directly or loaded from SPI Flash), erase the CrossLink device SRAM before reprogramming the CrossLink SPI Flash. Keep the board powered on to prevent reloading on reboot.

To erase CrossLink Device SRAM:
1. Launch Diamond Programmer with Create a new blank project.
2. Select LIFMD for Device Family and LIF-MD6000 for Device as shown in Figure 4.1.

![Figure 4.1. Select Device](image)

3. Right-click and select Device Properties dialog box.

![Figure 4.2. Device Operation](image)

5. Click OK to close the Device Properties dialog box.
6. Click the Program button in Diamond Programmer to start the erase sequence.
4.1.2. Programming the SPI on the CrossLink VIP Input Bridge Board

To program the SPI on the CrossLink VIP Input Bridge board:

1. Ensure the CrossLink device SRAM is erased by performing Steps 1-6.
2. Right-click and select **Device Properties**.
3. Select **SPI Flash Programming** for Access mode and make the following selections:
   a. For **Programming File**, browse and select the CrossLink bitfile (*.bit), *Dual_Camera_to_Parallel_Crosslink.bit*.
   b. For **SPI Flash Options**, refer to **Table 4.1**.

**Table 4.1. SPI Flash Options Selection Guide**

**Figure 4.3. Device Properties**
4. Click **OK** to close the **Device Properties** dialog box.

5. Click the **Program** button in Diamond Programmer to start the programming sequence.

6. After successful programming, the **Output** console displays the results as shown in **Figure 4.4**.

### 4.2. ECP5 VIP Processor Board

#### 4.2.1. Erasing the ECP5 Prior to Reprogramming

If the ECP5 VIP Processor and CrossLink VIP Input Bridge Boards are already configured and programmed, erase first the ECP5 SRAM memory, then program the ECP5 device’s SPI Flash. The demo design firmware must also be programmed onto the MicroSD card, which is plugged into the MicroSD Card Adaptor Board.

Keep the board powered when reprogramming the SPI Flash (see procedure in Programming the SPI on the ECP5 VIP Processor Board).

To erase the ECP5 device SRAM:

1. Launch Diamond Programmer with **Create a new blank project**.
2. Select **ECP5UM** for **Device Family** and **LFE5UM-8SF** for **Device**.

![Selecting Device](image)

**Figure 4.5. Selecting Device**

3. Right-click and select **Device Properties**.
4. Select **JTAG 1532 Mode** for **Access Mode** and **Erase Only** for **Operation**.
5. Click **OK** to close the Device Properties dialog box.

6. Click the **Program** button in Diamond Programmer to start the erase sequence.

**4.2.2. Programming the SPI on the ECP5 VIP Processor Board**

To program the SPI:

1. Ensure the ECP5 device is erased by performing Steps 1-6.

2. Right-click and select **Device Properties**.

3. Select **SPI Flash Background Programming** for **Access mode** and make the following selections:
   a. For **Programming File**, browse and select the Object Count Demo bitfile (*bit), *object_count_impl1.bit*.
   b. For **SPI Flash Options**, refer Table 4.2.

Figure 4.7 Device Properties

4. Click OK to close the Device Properties dialog box.

5. Click the Program button in Diamond Programmer to start the programming sequence.

6. After successful programming, the Output console displays the results as shown in Figure 4.8.
4.2.3. Programming the MicroSD Card Firmware

To write the image to the MicroSD Card:

1. Download and install the Win32diskimager Image Writer software from the following link: https://sourceforge.net/projects/win32diskimager/.

2. Use Win32diskimager to write the appropriate Flash image file to the SD memory card. Depending on your PC, you may need a separate adapter (not described in this document) to physically connect to the card.

3. In Win32 Disk Imager, select the Image File (HumanCounting_ResNet.bin) and Card Reader as shown in Figure 4.9.

4. Click Write.
5. Running the Demo

To run the demo:

1. Insert the configured MicroSD Card into the MicroSD Card Adapter, and connect it to the Embedded Vision Development Kit.
2. Cycle the power on the Embedded Vision Development Kit to allow ECP5 and CrossLink devices to be reconfigured from Flash.
3. Connect the Embedded Vision Development Kit to the HDMI monitor. The camera image is displayed on monitor as shown in Figure 5.1.
